Takes some of your print jobs and redirect them to various remote printers, servers or both.Q: Using a HTML5 Canvas object to produce a picture, but how do I save it out? I'm quite new at all this and I'm not even sure exactly what I'm asking. Basically I have a canvas object that holds the contents of an image. How can I save it out to a PNG? A: You can use the canvas.toBlob(callback) function to save out an image as data URI: var canvas = document.getElementById("myCanvas"); var img = new Image(); canvas.addEventListener("load", function () { img.src = canvas.toDataURL(); }); If the canvas.toBlob(callback) function does not work, just try drawing the image to the canvas, using a CSS background-image or as a canvas. For example: var canvas = document.getElementById("myCanvas"); var ctx = canvas.getContext("2d"); ctx.drawImage(img, 0, 0); // use CSS background-image: var cssImg = "url(" + canvas.toDataURL() + ")"; document.body.style.backgroundImage = cssImg; // or use canvas for imageData: ctx.canvas.toDataURL() Q: Load CustomImage From Base64 String in android I have an encrypted string that I have to load in an ImageView in android. I have the key and encrypted string. I need to decode the encrypted string and then load that decoded string in an ImageView. Can anybody point me in the right direction how to achieve this? I am able to decode the string using Base64 class but, I am not able to display that decoded string in an ImageView. public class MyActivity extends Activity implements LoaderManager.LoaderCallbacks { // Declare Variables ImageView iv1; ProgressBar progressBar; int counter=0; String s=""; String b64String; Bitmap bitmap; @Override protected
